## HQD 4.5KW Woodworking Advertising Water-Cooled Spindle Motor

 <p>弘阳数控® HONGYANG CNC</p>	<b>Model:</b>	GDZ-27
	<b>Dimensions:</b>	Φ100*300ΦM/M
	<b>Rotating Speed:</b>	24000RPM
	<b>Power:</b>	4.5KW
	<b>Voltage:</b>	220V/380V
	<b>Frequency:</b>	400HZ
	<b>Bearing:</b>	FOUR BEARINGS
	<b>Cooling Method:</b>	WATER COOLING
	<b>Chuck Nut:</b>	ER20
	<b>Current:</b>	/

1. Spindle motor should be used with the inverter. The specifications and parameters of the inverter should match the rated parameters of the spindle motor. If the settings are incorrect, the water cooled spindle will then be burned.
2. Before using, the water-cooled spindle motor must ensure that the cooling circulation system of itself can work normally, and it is strictly prohibited to use it without cooling water.
3. During the storage and transportation of the spindle motor, the state of the high-speed grease inside the bearing will change, and the customers should run the spindle at a low speed before use.
